Are you ready for an update in

## PEDIATRIC ALLERGY AND IMMUNOLOGY?

Join the Open Medical Institute  
in Mexico to learn from experts  
in your field!

Rushani W. Saltzman  
Course Director

The Open Medical Institute presents a seminar in Pediatric Allergy and Immunology at the School of Medicine and Health Sciences, Tec de Monterrey in Mexico City, Mexico. Led by experts from the world-renowned Children's Hospital of Philadelphia (CHOP), the course is held over three days and provides participants with the necessary knowledge to accurately diagnose and manage various immunological disorders and allergic conditions in children. The seminar consists of lectures, discussions, and case presentations.

Immunologists

# PEDIATRIC ALLERGY AND IMMUNOLOGY

The seminar targets clinicians in the areas of Pediatrics, Allergology, and Immunology, having either completed their specialization or being in the final phase of their residency. Participants must be fluent in English, which allows for intense interaction during lectures and discussions.

Attendance is mandatory for the entire course. Fellowships cover tuition, course materials, certificates, and meals.

Apply by:

March 25, 2024

# PEDIATRIC ALLERGY AND IMMUNOLOGY

## Lectures:

- Eczema, contact dermatitis, and urticaria
- Functional evaluation for immunodeficiency
- Genetic evaluation for immunodeficiency
- Non-IgE food allergy and eosinophilic esophagitis
- IgE food allergy and anaphylaxis
- Food challenges
- Food therapeutics
- Asthma management
- Asthma treatment, asthma Mimickers, and biologics for asthma
- Precision medicine in immunodeficiency
- Definitive therapies for immunodeficiency
- Environmental allergies and immunotherapy

# PEDIATRIC ALLERGY AND IMMUNOLOGY

## Learning Objectives:

- Understanding the clinical presenting signs and symptoms for common primary immunodeficiencies, discuss their diagnosis, and review current treatment modalities.
- Comparing IgE-mediated and non-IgE mediated food allergies (diagnosis, management, treatment) and highlighting state of the art food allergy therapeutics.
- Discussing the evaluation and diagnosis of asthma in children, including a review of preschool wheezing and asthma mimickers, comparing guidelines for asthma treatment, discussing emerging therapies, like biologic agents used in specific asthma endotypes.
- Reviewing additional atopic conditions seen in pediatric patients including allergic rhinitis, atopic dermatitis, urticaria, angioedema, venom allergy, and drug allergy.
