**Learning Objectives for Participants**

At the conclusion of this seminar, the participant should be better able to:

1. Understand and identify the imaging features of various common emergencies affecting neonates as well as older children.
2. Understand and identify the salient imaging findings in accidental and non-accidental trauma in brain, axial and appendicular skeletal trauma.
3. Recognize the imaging features of common vascular anomalies, and pediatric tumors of the brain, liver, kidneys, adrenals (neuroblastoma) and bone.
4. Understand the scope and optimally utilize the imaging modalities of plain radiographs, Fluoroscopy, Ultrasound, CT, and MRI in pediatric population.
