Learning Objectives for Participants

At the conclusion of this seminar, the participant should be better able to:

1. Understand the clinical presenting signs and symptoms for common primary immunodeficiencies, discuss their diagnosis, and review current treatment modalities.
2. Compare and contrast IgE-mediated and non-IgE mediated food allergies (diagnosis, management, treatment) and highlight state of the art food allergy therapeutics.
3. Discuss the evaluation and diagnosis of asthma in children, including a review of preschool wheezing and asthma mimickers. Compare and contrast guidelines for asthma treatment used in the United States vs. Europe. Discuss emerging therapies like biologic agents used in specific asthma endotypes.
4. Review additional atopic conditions seen in pediatric patients including allergic rhinitis, atopic dermatitis, urticaria, angioedema, venom allergy, and drug allergy.
